SCRIPT-CONTROLLED ACL

8. Project Demonstration

1. Log in to ServiceNow with administrator access.

2. Open the Institution Details table.

3. Impersonate the EEE user.

4. Demonstrate permitted EEE records.

5. Impersonate a user without the required role and demonstrate denied access.

6. Impersonate the administrator and demonstrate full access.

7. Demonstrate Create using bb2.

8. Demonstrate Write using bb3.

9. Demonstrate Delete using bb4.

Final result: The project demonstrates how READ, CREATE, WRITE and DELETE ACLs can be combined with user roles and record information to enforce record-level security in ServiceNow.
