SCRIPT-CONTROLLED ACL

5. Project Development Phase

Create the EEE User and configure roles bb1, bb2, bb3 and bb4.

Create the Institution Details table with name u_institution_details and the required fields.

Create a Record–Read ACL for u_institution_details, require bb1, add the EEE branch condition, and use the script-controlled access logic.

Create a Record–Create ACL for u_institution_details requiring bb2.

Create a Record–Write ACL for u_institution_details requiring bb3.

Create a Record–Delete ACL for u_institution_details requiring bb4.
